

COMPANY PROFILE

Heatec Jietong is one of the leading solution providers of Heat Exchangers, Piping, Pressure Vessels and Modular Structure for the marine, process, oil & gas industries, supporting both onshore and offshore energy needs.

Established in 2003 with the merger of Jietong Engineering (1990) and Heatec Asia Pacific (1994), Heatec Jietong's humble history began in the marine industry, providing heat exchangers and piping services. We grew from a small team of 14 employees to a 800 strong workforce today. While these core businesses remain as the primary focus, we have expanded our capability to include more services and products to better serve our clients.

Over the years, Heatec Jietong has developed into a complete solution provider for heat exchangers. With our in-house thermal and mechanical design engineers, together with our experienced technicians, we are able to design and manufacture heat exchangers such as Air Coolers, Shell & Tube Heat Exchangers etc, as well as conduct after sales maintenance services such as ultrasonic cleaning, re-tubing etc for our clients.

Heatec Jietong's other core business include piping services such as pipeline structure, restoration and installation works for all types of pipes and piping systems to shipyards and the oil & gas industry in Singapore. We have participated in process piping work, including piping fabrication for Floating Production Storage and Offloading (FPSO) turrets.

Heatec Jietong's newly established Graphics Division provides turnkey services for labelling complex piping systems and developing safety awareness systems for world class customers. Our ability to customise the labels and signage ensures that all our clients' specific needs are met.

Our range of products continues to expand as we move up the value chain to include skids or modular structures. Situated at our one hectare size premise with water frontage, Heatec Jietong has the capability to deliver larger skids or modular structures. Our engineering capability, coupled with our expertise in heat exchangers further enhances our position as a one-stop solution provider for our client's specific requirements for related skids.

Our subsidiary company Chem-Grow further complements our product offerings by providing chemical cleaning services to our clients in the marine, oil/petrochemical, food, pharmaceutical and the chemical industries. Equipped with our own chemical blending facility, we also manufacture our own range of chemicals for sales.

Another subsidiary of Heatec Jietong named Heatec Oilfield Services was established to provide fabrication, engineering and machining services to our valued clients from the offshore and oil & gas industries.

To better service our international customers, we have extended our presence beyond the shores of Singapore to China where our wholly-owned subsidiary company Heatec Shanghai Co. Ltd. provides equivalent product offerings and services to our customers.

Heatec Jietong's strong beliefs in quality and safety policies and our experienced team of devoted employees are dedicated to provide our customers with high quality products and timely delivery of services.

OUR ACHIEVEMENTS

As testimony to our commitment to quality and business excellence, our company has achieved the following certifications
